### **Finite automaton Wikipedia**

February 9th, 2019 - Finite automaton A finite automaton is a mathematical model of computation. It consists of a finite set of states, a finite set of input symbols, a finite set of output symbols, a transition function, an initial state, and a set of final states. The transition function maps each state and input symbol to a unique state. The initial state is the state where the automaton starts. The final states are the states where the automaton ends. The automaton processes an input string and produces an output string. The output string is the sequence of output symbols produced by the automaton as it processes the input string.
