The Neuroendocrine Leydig Cells and their Stem Cell

February 9th, 2019 - The Neuroendocrine Leydig Cells and their Stem Cell Progenitors the Pericytes Distributed by the microvasculature through the entire body the pericyte acting as a resting early pluripotent adult stem cell provides an ingenious system to assure the maintenance physiological repair and regeneration of organs each under the influence of specific local environmental factors Show all

The Neuroendocrine Leydig Cells and their Stem Cell

January 18th, 2019 - cells and the testicular localization of the intermediate filament protein nestin known to be expressed in neural stem cells by our group was the first step to define mural cells pericytes and vascular smooth muscle cells of the testis microvascu ture as the stem progenitor cells of the adult Leydig cells

The Neuroendocrine Leydig Cells and their Stem Cell

January 5th, 2019 - The discovery of the neuroendocrine features of Leydig cells gave rise to the hypothesis of a potential neuroectodermal and or neural crest origin of testicular Leydig cells In an experimental animal

model we revealed that adult Leydig cells originate by transdifferentiation from stem progenitor cells pericytes and smooth muscle cells underlying the close relationship of Leydig cells with testis microvasculature
